

What Are You Proving?

Week 1 - AI Fluency

Proof statement

I can solve complex AI engineering problems in production-grade systems. I want an AI Engineering hiring manager at a company building production AI systems to see clear evidence of how I approach difficult technical problems, make sound engineering decisions, and deliver reliable results. The one action I want them to take is to invite me to interview for an AI Engineering role.

Why this needs to exist

My CV and LinkedIn can summarize what I have worked on, but they cannot fully show how I reason through complex AI engineering problems, make technical decisions, debug difficult systems, and validate production-grade results.

Note: The claim, audience, action, and reasoning were chosen by me; AI was used as a thinking partner to challenge and refine the wording.
