

Keeping the Portfolio Alive

A simple update system for adding the next case without rebuilding the portfolio from scratch.

Next piece	Reminder	Context
FastAPI Task API	September 5, 2026	Existing Claude Project

How I will add the next case

The next case will go in the Selected Work section of my AI Engineering portfolio. I will reuse the same three-beat case shape from Week 2 so every new project is framed consistently: **the problem** → **what I did** → **what came of it**.

- 1. Open the existing Claude Project.** Use the same portfolio context instead of starting a new workspace.
- 2. Describe the project in plain language.** Give the real goal, constraints, technical decisions, and outcome.
- 3. Answer a short case interview.** Clarify the problem, what I decided, what I built, and what changed as a result.
- 4. Draft the three-beat case.** Write the problem, what I did, and what came of it in the same direct voice as the current portfolio.
- 5. Add evidence.** Link the repository, screenshots, test results, documentation, or other proof that supports the claims.
- 6. Edit hard before publishing.** Remove any sentence I would not say in an interview or cannot explain and defend.
- 7. Publish it under Selected Work.** Add the case without expanding the portfolio structure unless the new work genuinely needs it.

The next real piece

FastAPI Task API

I will add the FastAPI Task API I built during the Backend AI Engineering track. It is a good next case because it is recent, complete, and easy to support with visible evidence rather than description alone.

The case will focus on:

- building a complete CRUD API with FastAPI and in-memory storage;
- input validation and deliberate HTTP status-code behavior;
- interactive Swagger documentation and end-to-end API testing;
- stage-by-stage Git history and a README that another developer can follow;
- comparing my implementation with an AI-generated version and documenting what the prompt missed.

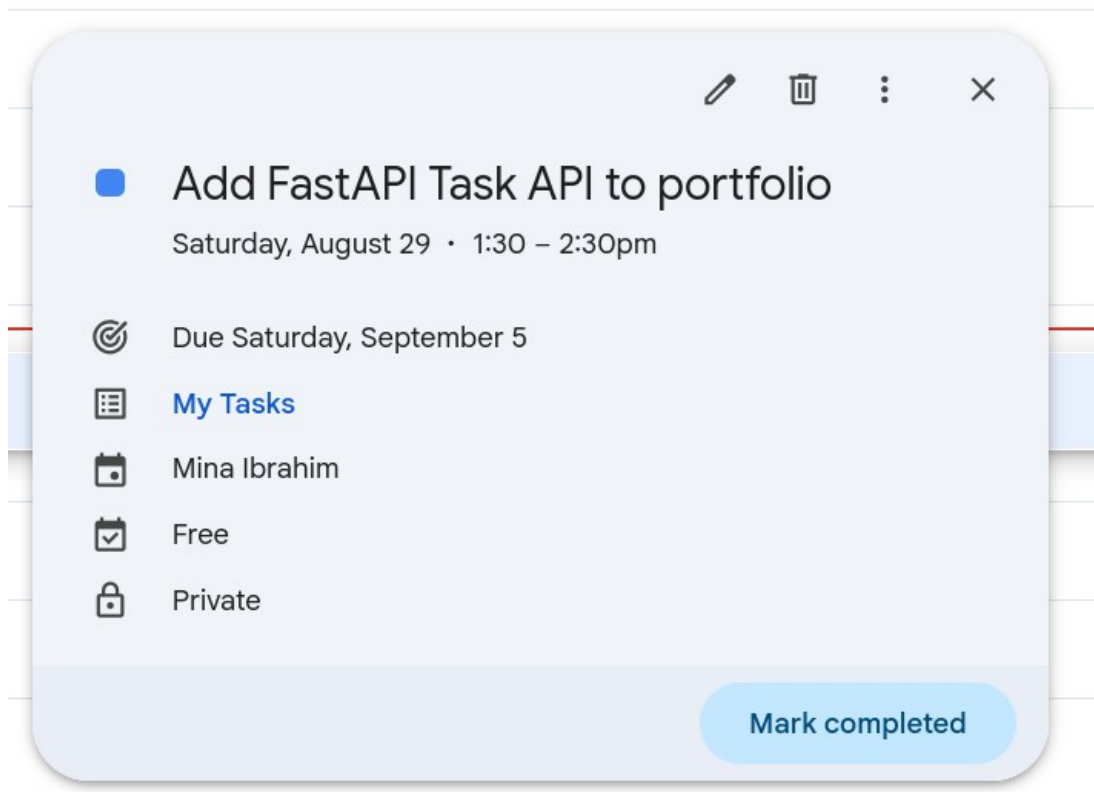

Build context preserved

I will keep using the Claude Project that already contains my portfolio proof statement, audience, voice, and working instructions. That means the next case can start as a short interview about the new project instead of rebuilding the portfolio context every time.

Standing voice: Direct, technical, clear, grounded, no buzzwords.

Reminder evidence

A real reminder is set so the update does not stay as an intention. The task is due on Saturday, September 5, 2026.

Google Task: “Add FastAPI Task API to portfolio” — due September 5, 2026

Submission check

- Concrete note explains exactly where the next case goes and how it will be added.
- A specific next piece is named: FastAPI Task API.
- A real reminder is set and shown above.
- The existing Claude Project is explicitly preserved for future portfolio updates.
